

ESI Mobile Messaging

for ESI Communications Servers

Maximizes your access to messages

ESI Mobile Messaging combines the advanced capabilities of an ESI business communications system with the convenience of your existing e-mail account. When you receive a message (a voice mail or a recording) at an extension or guest mailbox, you also receive an e-mailed notification to which a .WAV file of the message is attached. The notification's header contains information about the message — the Caller ID name and number, as well as the call's date, time, and duration. ESI Mobile Messaging also lets you quickly do these (and more):

- **Listen to a message on your PC or “smartphone”** — Play back a message on your PC or “smartphone” by simply double-clicking the attachment.
- **Share messages** — Forward important messages to interested individuals, even if they're not on your ESI system.
- **Choose which messages to handle and how to manage them** — Got numerous messages? You can directly access any one of them right away.
- **Remotely manage messages** — You can manage messages using Web mail from: a home PC or laptop; a personal (or alternate) e-mail account; or a “smartphone.”
- **Store important messages** — Save a message attachment to a hard drive or USB flash drive.
- **Choose one of two e-mail accounts** at which to receive e-mailed notifications of messages.

Compatible with VIP™

If you also use one of ESI's *VIP* applications in tandem with *Outlook*, ESI Mobile Messaging gives you an additional capability: simply selecting an e-mailed notification in the *Outlook* Inbox lets you handle the message by using the *VIP* toolbar.

Find out more about ESI Mobile Messaging, and the ESI Communications Servers with which it works, from your Certified ESI Reseller or by visiting www.esicomservers.com.
